

Mini Stun Gun

WOW...

the new ZAP Mini Stun Gun. This mini device has all the power and features one would need for protection in a very compact and easy to carry size. Small enough to fit inside a pack of cigarettes, the ZAP emits a surprising amount of voltage- your choice of

350,000,

650,000, or

950,000 volts. It features a unique rubberized texture, a safety switch to prevent accidental firing, and a "ready to use" LED indicator.

It is powered by three lithium batteries, included in the package, and a nylon holster. Never

take a chance again... especially with a rechargeable stun gun. Remember lithium batteries will hold their charge for years without use while rechargeable units are not reliable.

A mini stun gun like this is small enough to be easily hidden in your pocket or purse, yet it will bring a grown man to his knees in a matter of seconds. The sound of it alone is very loud and freighting. This is a perfect item for your piece of mind.
